

## **22. Epilepsy School organized by the Serbian League Against Epilepsy**

**(Ruma, October 29-31, 2021)**

### **The Report**

The covid 19 pandemic significantly affected all domains of our lives, personal and professional activities, being the reason why the regular 22nd Epilepsy School planned for 2021 was postponed. The great wish of the League presidency, especially Doc. Ristic, with respect of all epidemiological measures, was to school be kept live, believing that it is the best way to exchange experience, hear the latest achievements and ask questions in direct discussion. It turned out that the epileptology community lacked a living word, which is evidenced by the impressive, record number of participants - 98, including lecturers and experts in epileptology and neurology, presenters and young epileptologists from Serbia, Montenegro and Republic of Srpska.

The program was carefully designed by Prof. Sokić and "Epilepsy and urgency" proved to be a very current topic because the time set aside for discussion was too short for all questions. The collegial and well-intentioned spirit of all participants significantly contributed to the upward learning curve of the 22nd Epilepsy School.

With the wish to get together next year and have an even better and more successful school,

Cordial greetings,

Serbian League Against Epilepsy
